iSBC 416
16K EPROM EXPANSION BOARD

- Allows iSBC 80 EPROM/ROM expansion through the MULTIBUS interface
- Sockets for up to 16K bytes of Intel 2708 programmable and erasable PROM
- Switches enable or disable each memory block
- Jumper selectable addresses for each 8K block
- Buffered address and data lines

The iSBC 416 16K EPROM Expansion Board is a member of Intel's complete line of iSBC memory and I/O expansion boards. The iSBC 416 interfaces directly to any iSBC 80 single board computer via the system bus to expand EPROM memory capacity. The board contains 16 sockets that can house Intel 2708 programmable and erasable EPROMs. EPROM memory can be added in 1K-byte increments. The iSBC 416 contains a set of jumpers allowing the selection of the base address of independent 8K memory blocks, to begin on any 8K boundary. Switches are used to enable on-board memory in 1K block increments.
